

# ATLAS DIGITAL SOLUTIONS

## ABSOLUTE DATA PROTECTION

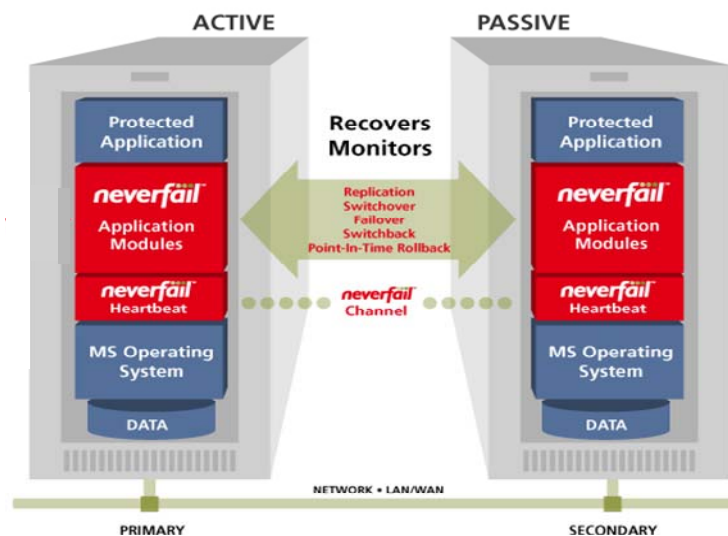

### ATLASNEVERFAIL: A CONTINUOUS SERVICE SOLUTION FOR YOUR BLACKBERRY® ENVIRONMENT

Wireless solutions have become more than a critical communications tool for the executive; they have become enablers of change across the entire workforce. Today, a growing percentage of the workforce is “mobile” and platforms, such as BlackBerry, enable employees to maintain a constant dialogue with customers, business partners, employees and other constituents.

ATLASNEVERFAIL for BlackBerry provides an affordable solution that keeps users constantly connected to their BlackBerry environment, regardless of what type of system failure might occur. ATLASNEVERFAIL integrates with virtually all back-end messaging applications, including Exchange, Lotus Domino, Novell GroupWise, and CRM Systems. ATLASNEVERFAIL is the only “cluster-class”, high-availability solution designed to proactively monitor the health of the entire BlackBerry environment, including the application, operating system, physical server hardware, and network infrastructure. ATLASNEVERFAIL replicates data from your active to passive server and can be configured to protect your service in either LAN or WAN environment. As a result, your BlackBerry server is always protected, whether hosted in the same server room or across the globe. When problems arise, ATLASNEVERFAIL takes a variety of preemptive, corrective actions to avoid a full system failover and assures continuity of connected service.

#### ATLASNEVERFAIL SOLUTION

- ◆ Fully Managed High Availability BlackBerry Solution – 24x7x365
- ◆ Seamless failover, switchover and switchback
- ◆ Integrated WAN support for full site protection
- ◆ Simple, low-cost alternative to clustering

ATLASNEVERFAIL provides a “cluster-class”, constant connect solution that is affordable and straightforward to manage, while ensuring that your workforce remains continuously connected to clients, colleagues, and other critical partners.
