

ABSOLUTE DATA PROTECTION

ATLASREPLICA – A FULLY MANAGED CONTINUOUS DATA PROTECTION (CDP) SOLUTION

When disaster strikes, whether in the form of a catastrophic disaster, a virus attack, or user error, your ability to respond well to the crisis can make the difference between success and the end of your business. At the very least, you are likely to incur significant costs in lost business, and perhaps more importantly, lost confidence by your customers, investors, and other stakeholders. ATLASREPLICA provides continuous data protection against both inadvertent and malicious data corruption.

As the use of information technology to fuel business processes has grown, so too have the needs for collateral technologies to ensure that the data and applications that underlie these processes can be brought back online within a reasonable timeframe.

- ATLASREPLICA SOLUTION**
- ◆ Fully Managed Solution – 24x7x365
 - ◆ Real-Time Offsite Data Replication
 - ◆ Delta Backup Technology
 - ◆ Built-in Open File Protection
 - ◆ High Availability Access to Data and Applications
 - ◆ SLA-Guaranteed Recovery

ATLASREPLICA is a high availability data protection solution for mission critical applications. Entire databases, along with open files and system settings are synchronized, ensuring that every bit of information, up to the moment catastrophe strikes, is backed up and accessible. Here are the top reasons to implement ATLASREPLICA:

ATLASREPLICA SOLUTION	
CDP	AtlasReplica provides our clients with continuous business data flow, ensuring databases, files and system settings are synchronized and accessible in case of an emergency.
Secure Off-Site Protection	AtlasReplica instantly protects data offsite in real-time to one of our world class data centers, eliminating the disaster risk of having primary and recovery data in the same location.
Assured Recovery	Should a server fail, its synchronized counterpart may be brought on-line to maintain high data availability, and your employees will retain continued access to your organization's information resources.
Open Files	AtlasReplica protects your active data even while being accessed.
Secured Data	All replicated data is highly encrypted before being sent offsite to the Atlas Digital Solutions data center.
Managed Solution	AtlasReplica is fully managed, allowing your IT Staff to focus on strategic initiatives.
Optional Backup	While replicated data is stored, you may choose to take advantage of AtlasVault, our online backup service, that will automatically create historical retentions for archival storage and recovery.
Regulatory Compliance	AtlasReplica and AtlasVault exceed the “data safeguards” rules defined by Sarbanes-Oxley, HIPAA, NASD and NYSE.

Hosted in one of our world class data centers, ATLASREPLICA eliminates application or file server downtime with byte-level replication and immediate failover. With Atlas Digital Solutions, your data is highly secure during transmission, storage and recovery.
